Summary

— Experienced backend developer proficient in Java, Node.js, and Python. Delivers high-quality software solutions for clients and passionate about creating efficient solutions that meet unique needs of clients and end-users.

— Self-motivated individual with excellent problem-solving skills. Collaborates with project managers to deliver projects on time and within budget. Possesses expertise in latest development practices and tools, creates tailored robust and reliable applications.

— Excellent communication and interpersonal skills. Keeps up-to-date with latest technologies and industry trends, committed to growth. Confident in making valuable contributions to any project and delivering exceptional results.

Skills

» Java
» Spring
» OracleDB
» Docker
» K8s
» REST & SOAP
» Git
» Kafka
» OSB/ESB
» Python
» JS
» AI/ML
» Data processing

Experience

VMO Holdings (2022 - Present)

Senior Software engineer — P2C Jul 2022 - Present

Maintained multiple sub-system projects for PCCW (Hong Kong) client as an outsourced Java developer.

- Active communicated with the in-house development team to understand project requirements and design specifications
- Led a 3 members team, developed new features and improved old features for the client's services using Java and related technologies and utilized SQL Server for database management.

Java | Struts | Spring | SOAP | REST | Git | JSP | Jquery | Jira

Enterprise Nao (2018 - 2022)

Team lead — Vietinbank E-Fast business customers banking service Jul 2021 - Jun 2022

Rebuilt Vietinbank's business customer banking service into microservices as an outsourced Java developer.

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 6 backend members, developed microservices for the banking service using Java and related technologies, such as Spring Boot, Hibernate and Docker, Kubernetes
- The developed product has won the Golden Star (Sao Khue) Award.

Java | Spring | Hibernate | Jasper Report | REST | OracleDB | Docker | K8s | Git | Jira

Team lead — Vietinbank E-Connect Jun 2021 - Mar 2022

Worked as an outsourced Java developer and built a Vietinbank system which supported connections from other systems like Misa ERP, Grab, etc.

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 4 members, developed microservices using Java and related technologies, such as Spring and Hibernate.

Java | Spring | Hibernate | Jasper Report | REST | OracleDB | Docker | K8s | Git | Jira

Team lead — National population database Mar 2020 - Jul 2021

Designed and built the National Population Database project under the Ministry of Public Security as an outsourced developer.

- Worked closely with the internal software engineers to grasp the key needs and technical details of the product
- Led a team with 3 members, developed services using Java and related technologies, such as Java, OSB, Weblogic.
- Attended to develop services in the system for managing population data using Spring Boot

- Supported connections from LGSP and NGSP to the developed services.

Java | Spring | Hibernate | Oracle DB | Oracle Service Bus | SOAP | REST | Weblogic | Git

Software engineer — ATM transactions fraud detection Aug 2019 - Mar 2020

Designed and built real-time fraud detection system for ATM transactions, resulting in a significant reduction in fraudulent activity.

- Implemented algorithms and tools such as Tibco Statica, Tibco Datascience, Sk-learn and Tree-based algorithms, etc
- Deployed trained model with the ~30% true positive (actual fraudulent activity) and ~25% false negative (actual non-fraudulent notify) result.

Java | Python | Hibernate | Spring | Kafka | AI/ML | OracleDB | Docker | Git

Software engineer — In-house device management system Oct 2018 - Aug 2019

Collaborated with a startup to build an IoT application for managing the status of various in-house devices (such as those in buildings and stores).

- Used and customized Thingsboard CE features
- Developed simulator tool for pushing data continuously to the Thingsboard platform
- Implemented embedded C in device simulators to understand how the embedded devices work.

Java | C | Thingsboard | MQTT | Git | Docker

Software engineer — Scraping user data Jan 2018 - Oct 2018

Built the Java-based data platform that scrapes types of data from various sources, including social media platforms, websites, and search engines.

- Implemented solutions for scraping tools and techniques such as Apache Storm streaming, Selenium, Headless browsers API, Facebook GraphAPI,... to the team.

Java | Cassandra | Apache Storm | Selenium | SVN

Education

Sep 2015 - Jul 2018

Hanoi vocational College of Technology (Higher Vocational Diploma)

- GPA: 8.4/10
- #1 score of graduation project of Information Technology department
- Teaching assistant for some subjects such as OOP, DSA, Java
