Summary

— Experienced backend developer proficient in Java, Node.js, and Python. Delivers high-quality software solutions for clients and passionate about creating efficient solutions that meet unique needs of clients and end-users.

— Self-motivated individual with excellent problem-solving skills. Collaborates with project managers to deliver projects on time and within budget. Possesses expertise in latest development practices and tools, creates tailored robust and reliable applications.

— Excellent communication and interpersonal skills. Keeps up-to-date with latest technologies and industry trends, committed to growth. Confident in making valuable contributions to any project and delivering exceptional results.

Skills

» Java (proficient)
» Docker (proficient)
» SOAP (proficient)
» OSB/ESB (intermediate)
» AI/ML (beginner)
» Spring (proficient)
» K8s (proficient)
» Git (proficient)
» Python (intermediate)
» ETL processing (beginner)
» OracleDB (proficient)
» REST (proficient)
» Kafka (intermediate)
» JS (beginner)

Experience

VMO Holdings (2022 - Present)

Senior Software engineer — P2C Aug 2022 - Present

Worked as an outsourced Java developer for maintaining multiple sub-system projects of PCCW (Hongkong) client

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a 3 members team, developed and implemented new features for the client's services using Java and related technologies, such as Spring, Hibernate, Struts 2, and utilized SQL Server for database management

Java | Struts | Spring | SOAP | REST | Git | JSP | Jquery | Jira

Enterprise Nao (2018 - 2022)

Team lead — Vietinbank E-Fast business customers banking service Jun 2021 - Aug 2022

Worked as an outsourced Java developer for rebuilding Vietinbank business customer banking service to microservices

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 10 members, developed and implemented new microservices for the banking service using Java and related technologies, such as Spring Boot and Docker, Kubernetes

Java | Spring | Hibernate | REST | OracleDB | Docker | K8s | Git | Jira

Team lead — Vietinbank E-Connect May 2021 - Jun 2022

Worked as an outsourced Java developer for designing and building Vietinbank system which supports connections from other systems like Misa ERP, Grab, etc...

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 4 members, developed and implemented new features for the system using Java and related technologies, such as Spring and Hibernate

Java | Spring | Hibernate | REST | OracleDB | Docker | K8s | Git | Jira

Team lead — National population database Mar 2020 - Jul 2021

Worked as an outsourced developer for designing and building National Population Database project under the Ministry of Public Security

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 5 members, developed and implemented new features for the database using Java and related technologies, such as JDBC and SQL

Java | Spring | Hibernate | Oracle DB | Oracle Service Bus | SOAP | REST | Git

Software engineer — Fraud detection on ATM transactions Aug 2019 - Mar 2020

Designed and built real-time fraud detection system for ATM transactions, resulting in a significant reduction in fraudulent activity.

- Implemented new fraud detection algorithms such as Sk-learn and Tree-based algorithms, Tibco Statica, Tibco Datascience, etc....
- Deployed trained model with the ~40% true positive (actual fraudulent activity) and ~15% false negative (fake notify) result.

Java | Python | Hibernate | Spring | Kafka | AI/ML | OracleDB | Docker | Git

Software engineer — In-house device management system Oct 2018 - Aug 2019

Collaborated with another startup for building the IOT application for managing multiple types of in-house (building, store, etc...) devices' status

- Studied to use and customized Thingsboard CE features
- Developed simulator tool for pushing data continuously to the Thingsboard platform
- Implemented embedded C in device simulators to understand how the embedded devices work

Java | C | Thingboards | MQTT | Git | Docker

Software engineer — Scraping user data Jan 2018 - Oct 2018

Built the Java-based data platform that scrapes types of data from various sources, including social media platforms, websites, and search engines

- Studied, suggested, implemented solutions for scraping tools and techniques such as Apache Storm streaming, Selenium, Headless browsers API, Facebook GraphAPI,... to the team.

Java | Cassandra | Apache Storm | Selenium | SVN

Education

Sep 2015 - July 2018

Hanoi vocational College of Technology (Higher Vocational Diploma)

- GPA: 8.4/10
- #1 score of graduation project of Information Technology department
- Teaching assistant for some subjects such as OOP, DSA, Java
