Summary

— Experienced backend developer proficient in Java, Node.js, and Python. Delivers high-quality software solutions for clients and passionate about creating efficient solutions that meet unique needs of clients and end-users.

— Self-motivated individual with excellent problem-solving skills. Collaborates with project managers to deliver projects on time and within budget. Possesses expertise in latest development practices and tools, creates tailored robust and reliable applications.

— Excellent communication and interpersonal skills. Keeps up-to-date with latest technologies and industry trends, committed to growth. Confident in making valuable contributions to any project and delivering exceptional results.

Skills

» Java (proficient)
» Docker (proficient)
» SOAP (proficient)
» OSB/ESB (intermediate)
» AI/ML (beginner)
» Spring (proficient)
» K8s (proficient)
» Git (proficient)
» Python (intermediate)
» ETL processing (beginner)
» OracleDB (proficient)
» REST (proficient)
» Kafka (intermediate)
» JS (beginner)

Experience

VMO Holdings (2022 - Present)

Senior Software engineer — P2C Aug 2022 - Present

Worked as an outsourced Java developer for maintaining multiple sub-system projects of PCCW (Hongkong) client

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a 3 members team, developed new features and improved old features for the client's services using Java and related technologies, such as Spring, Hibernate, Struts 2, and utilized SQL Server for database management

Java | Struts | Spring | SOAP | REST | Git | JSP | Jquery | Jira

Enterprise Nao (2018 - 2022)

Team lead — Vietinbank E-Fast business customers banking service Jun 2021 - Aug 2022

Worked as an outsourced Java developer for rebuilding Vietinbank business customer banking service to microservices

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 10 members, developed and implemented new microservices for the banking service using Java and related technologies, such as Spring Boot and Docker, Kubernetes

Java | Spring | Hibernate | REST | OracleDB | Docker | K8s | Git | Jira

Team lead — Vietinbank E-Connect May 2021 - Jun 2022

Worked as an outsourced Java developer for designing and building Vietinbank system which supports connections from other systems like Misa ERP, Grab, etc...

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 4 members, developed and implemented new features for the system using Java and related technologies, such as Spring and Hibernate

Java | Spring | Hibernate | REST | OracleDB | Docker | K8s | Git | Jira

Team lead — National population database Mar 2020 - Jul 2021

Worked as an outsourced developer for designing and building National Population Database project under the Ministry of Public Security

- Collaborated with the in-house development team to understand project requirements and design specifications
- Led a team with 5 members, developed and implemented new features for the database using Java and related technologies, such as JDBC and SQL

Java | Spring | Hibernate | Oracle DB | Oracle Service Bus | SOAP | REST | Git

Software engineer — Fraud detection on ATM transactions Aug 2019 - Mar 2020

Designed and built real-time fraud detection system for ATM transactions, resulting in a significant reduction in fraudulent activity.

- Implemented new fraud detection algorithms such as Sk-learn and Tree-based algorithms, Tibco Statica, Tibco Datascience, etc....
- Deployed trained model with the ~40% true positive (actual fraudulent activity) and ~15% false negative (fake notify) result.

Java | Python | Hibernate | Spring | Kafka | AI/ML | OracleDB | Docker | Git

Software engineer — In-house device management system Oct 2018 - Aug 2019

Collaborated with another startup for building the IOT application for managing multiple types of in-house (building, store, etc...) devices' status

- Studied to use and customized Thingsboard CE features
- Developed simulator tool for pushing data continuously to the Thingsboard platform
- Implemented embedded C in device simulators to understand how the embedded devices work

Java | C | Thingboards | MQTT | Git | Docker

Software engineer — Scraping user data Jan 2018 - Oct 2018

Built the Java-based data platform that scrapes types of data from various sources, including social media platforms, websites, and search engines

- Studied, suggested, implemented solutions for scraping tools and techniques such as Apache Storm streaming, Selenium, Headless browsers API, Facebook GraphAPI,... to the team.

Java | Cassandra | Apache Storm | Selenium | SVN

Education

Sep 2015 - July 2018

Hanoi vocational College of Technology (Higher Vocational Diploma)

- GPA: 8.4/10
- #1 score of graduation project of Information Technology department
- Teaching assistant for some subjects such as OOP, DSA, Java
